

Stainless steel replacement boilertank

The Heatek boilertank is a replacement tank for the traditional Truma boilertank.

Advantages Heatek Boilertank

The Heatek boilertank is the ideal solution for a cracked boilertank or as a preventive measurement. The tank holds up to 6 liters of water, which is 20% more than any traditional boilertank. The new stainless steel design prevents any damage caused by freezing temperatures.

In order to ensure clean and high quality drinking water, the Heatek boilertank meets all safety requirements of the European Union. All tanks have been tested with system pressure up to 2.0 bar.

Technical specifications ✓

Full stainless steel design

6 liter capacity (20% more than the traditional tanks)

Lightweight and compact (1.1 kg)

Dimensions: 258 x 172 x 193 mm

Max. pump pressure: 2.0 bar

Replaces the traditional Truma boilertank

Efficient heating capability

100% recyclable

For pressure-resistant hot water hoses with 10 mm diameter

Complies with European drinking water standard 98/83/EC
